

Alloy Language & Analysis

Excerpted (mostly), adapted (a bit) from:

SAIL Tutorial at

http://alloy.mit.edu/alloy/tutorials/day-

course/

by Greg Dennis and Rob Seater

Alloy = logic + language + analysis

- logic
 - first order logic + relational calculus
- language
 - syntax for structuring specifications in the logic
- analysis
 - bounded exhaustive search for counterexample to a claimed property using SAT

alloy language & analysis

- language = syntax for structuring specifications in logic
 - shorthands, puns, sugar
- analysis = tool for finding solutions to logical formulas
 - searches for and visualizes counterexamples

Alloy: The Language & Analysis

"I'm My Own Grandpa" Song

- popular radio skit originally written in the 1930's
- expanded into hit song by "Lonzo and Oscar" in 1948

CSE 814

Alloy: The Language & Analysis

"I'm My Own Grandpa" in Alloy

```
module grandpa
abstract sig Person {
  father: lone Man,
  mother: lone Woman
siq Man extends Person {
  wife: lone Woman
siq Woman extends Person {
  husband: lone Man
fact {
  no p: Person
   p in p.^(mother + father)
  wife = \simhusband
  no wife &
      *(mother+father).mother
  no husband &
      *(mother+father).father
```

```
assert noSelfFather {
 no m: Man | m = m.father
check noSelfFather
fun grandpas [p: Person] : set Person {
  let parent = mother + father +
               father.wife +
               mother.husband |
    p.parent.parent & Man
pred ownGrandpa[p: Person] {
p in grandpas[p]
run ownGrandpa for 4 Person
```

language: module header

module grandpa

• first non-comment of an Alloy model

language: signatures

```
sig A {}
set of atoms A
siq A {}
siq B {}
disjoint sets A and B (no A & B)
siq A, B {}
same as above
siq B extends A {}
set B is a subset of A (B in A)
sig B extends A {}
siq C extends A {}
B and C are disjoint subsets of A
 (B in A && C in A && no B & C)
sig B, C extends A {}
same as above
```

```
abstract sig A {}
sig B extends A {}
sig C extends A {}
A is partitioned by disjoint subsets B and C
 (no B \& C \&\& A = (B + C))
sig B in A {}
B is a subset of A – not necessarily
 disjoint from any other set
sig C in A + B {}
C is a subset of the union of A and B
one sig A {}
lone sig B {}
some siq C { }
A is a singleton set
B is a singleton or empty
C is a non-empty set
```

grandpa: signatures

```
abstract sig Person {
    . . .
}

sig Man extends Person {
    . . .
}

sig Woman extends Person {
    . . .
}
```

- all men and women are persons
- no person is both a man and a woman
- all persons are either men or women

language: fields

```
sig A {f: e}
                                         sig A {f, q: m e}
                                         two fields with same constraints
•f is a binary relation with domain A
and range given by expression e
                                         siq A {f: e1 m -> n e2}
•f is constrained to be a function
                                         (f: A -> (e1 \ m -> n \ e2)) \ or
(f: A \rightarrow one \ e) \ or \ (all \ a: A \mid a.f: \ e)
                                          (all\ a: A \mid a.f: e1\ m \rightarrow n\ e2)
sig A {
   f1: one
               e1,
                                         sig Book {
   f2: lone e2,
                                            names: set Name,
   f3: some e3,
                                            addrs: names -> Addr
  f4: set e4
                                         dependent fields
(all a: A | a.fn : m e)
                                         (all b: Book | b.addrs: b.names -> Addr)
```

grandpa: fields

```
abstract sig Person {
  father: lone Man,
  mother: lone Woman
}

sig Man extends Person {
  wife: lone Woman
}

sig Woman extends Person {
  husband: lone Man
}
```

- fathers are men and everyone has at most one
- mothers are women and everyone has at most one
- wives are women and every man has at most one
- husbands are men and every woman has at most one
 CSE 814
 Alloy: The Language & Analysis

language: facts

```
fact { F }
                           facts introduce constraints that
fact f { F }
                            are assumed to always hold
sig S { ... } { F }
siq Host {}
sig Link {from, to: Host}
fact {all x: Link | x.from != x.to}
no links from a host to itself
fact noSelfLinks {all x: Link | x.from != x.to}
same as above
sig Link {from, to: Host} {from != to}
same as above, with implicit 'this.'
```

grandpa: fact

```
fact Biology {
  no p: Person | p in p.^(mother + father)
}
```

```
fact Terminlogy { wife = ~husband }
```

```
fact SocialConvention {
  no wife & *(mother+father).mother
  no husband & *(mother + father).father
}
```

- no person is his or her own ancestor
- a man's [woman's] wife [husband] has that man [woman] as a husband [wife]
- a man [woman] does not marry one of his [her] ancestors who is also a mother [father]

CSE 814

Alloy: The Language & Analysis

language: functions

```
fun f[x_1: e_1, ..., x_n: e_n] : e { E }
```

- a function is a named expression with declaration parameters and a declaration expression as a result
- invoked by providing an expression for each parameter

```
sig Name, Addr {}
sig Book {
  addr: Name -> Addr
}

fun lookup[b: Book, n: Name] : set Addr {
  b.addr[n]
}

fact everyNameMapped {
  all b: Book, n: Name | some lookup[b, n]
}

  Alloy: The Language & Analysis
```

language: predicates

```
pred p[x_1: e_1, ..., x_n: e_n] \{ F \}
named formula with declaration parameters
sig Name, Addr {}
sig Book {
  addr: Name -> Addr
pred contains[b: Book, n: Name, d: Addr] {
  n->d in b.addr
fact everyNameMapped {
  all b: Book, n: Name |
    some d: Addr | contains[b, n, a]
```

grandpa: function and predicate

• a one's grandpas are the male parents of one's own parents, where one's parents are one's mother, one's father and one's father's wife and one's mother's husband, if any

language: assertions

assert a { F }

constraint intended to follow from facts of the model

```
Boss, may I attend the assertiveness training seminar?

NO!
```

```
sig Node {
  children: set Node
one sig Root extends Node {}
fact {
  Node in Root.*children
// invalid assertion:
assert someParent {
  all n: Node | some children.n
// valid assertion:
assert someParent {
  all n: Node - Root | some children.n
```

CSE 814

17

language: check command

```
instructs analyzer to search for
assert a { F }
check a scope
                            counterexample to assertion within scope
if model has facts M
                                        abstract sig Person {}
                                        sig Man extends Person {}
 finds solution to M &&!F
                                        sig Woman extends Person {}
                                        sig Grandpa extends Man {}
check a
                                        check a
top-level sigs bound by 3
                                        check a for 4
check a for default
                                        check a for 4 but 3 Woman
                                        check a for 4 but 3 Man, 5 Woman
top-level sigs bound by default
                                        check a for 4 Person
check a for default but list
                                        check a for 4 Person, 3 Woman
default overridden by bounds in list
                                        check a for 3 Man, 4 Woman
                                        check a for 3 Man, 4 Woman, 2 Grandpa
check a for list
sigs bound in list,
                                        // invalid:
 invalid if any top level sig unbound
                                        check a for 3 Man
                                        check a for 5 Woman, 2 Grandpa
```

Alloy: The Language & Analysis

grandpa: assertion check

```
fact Biology {
   no p: Person | p in p.^(mother + father)
}
assert noSelfFather {
   no m: Man | m = m.father
}
check noSelfFather
```

- sanity check
- command instructs analyzer to search for counterexample to *noSelfFather* within a scope of at most 3 *Persons*
- noSelfFather assertion follows from fact

language: run command

```
pred p[x: X, y: Y, ...] { F } instructs analyzer to search for
run p scope
```

instance of predicate within scope

if model has facts M, finds solution to *M* && (some x: X, y: Y, ... | F)

```
fun f[x: X, y: Y, ...] : R { E }
run f scope
```

instructs analyzer to search for instance of function within scope

if model has facts M, finds solution to $M \&\& (some \ x: \ X, \ y: \ Y, \ ..., \ result: \ R \mid result = E)$

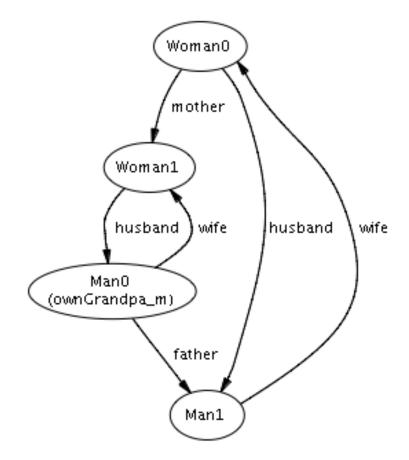

grandpa: predicate simulation

• command instructs analyzer to search for configuration with at most 4 people in which a man is his own grandfather

introduction to visualization

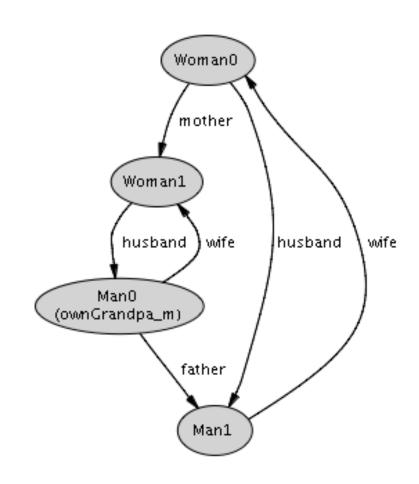

- > Download *grandpa.als* from the tutorial website
- Click "Execute"
- Click "Show"
- Click "Theme"

superficial

- types and sets
 - default color → gray
 - Apply
 - $man color \rightarrow blue$
 - woman color \rightarrow red
 - Apply
- also notice:
 - hide unconnected nodes
 - orientation
 - layout backwards

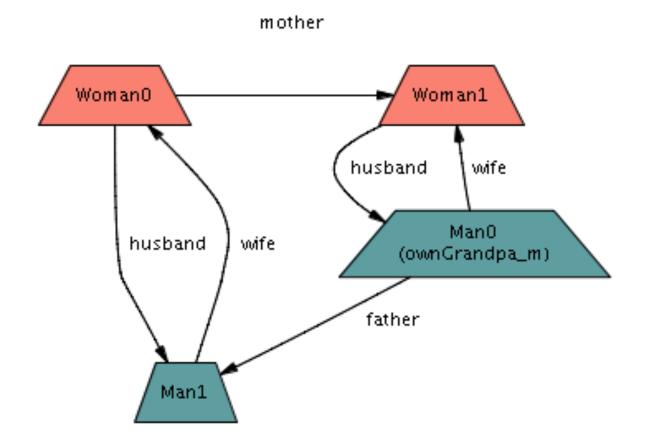

types & sets

- types: from signatures
 - person shape → trapezoid
 - notice it carries down to man, woman
 - woman: align by type
 - Apply

types & sets

types & sets

- sets: from existentials, runs, checks
 - somewhat intelligently named
 - \$ownGrandpa_m label → self-grandpa
 - Apply

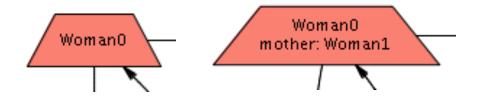

- pitfall: don't show vs. don't show as label (vs. don't show in customizer...)

relations

• relations

- mother: show as attribute → check
 (still shown as arc)
- gray = inherited (vs. overridden)
- Apply

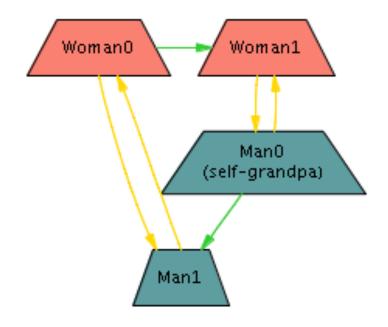

relations

relations

- mother: show as attribute → uncheck
- father, mother, husband, wife: label → ""
- father, mother: $color \rightarrow green$
- husband, wife: $color \rightarrow yellow$
- Apply

relations

finishing up

- save theme
- close theme

create your own visualization for the barber exercise!
